

## Paper Manufacturers

**Yeah, but are they talking about me?**

**We here at Genesis can talk about SpeedyDry until our faces turn blue, but we think it makes more sense to hear what folks are saying about us in the marketplace:**

“SpeedyDry does just what its name implies. It speeds up drying using conventional oil base inks. By adding SpeedyDry you reduce the drying time dramatically. This works on all the substrates that my customers have tried it on. By adding SpeedyDry to conventional ink you produce ink that dries quicker, and at a lower price than 100% oxidizing inks. In addition it does not dry on the rollers like oxidizing inks. I have customers that have been able to produce jobs using SpeedyDry that they were never able to produce using any other product.”

– Chuck Schultz  
Technical Service Manager  
Arjobex (Polyart)

“No other drier, in all the years of printing, is able to do what SpeedyDry does. We have recommended this drier in every case to solve an ink/paper drying issue. Once printers use SpeedyDry, it becomes the mainstay drier. Reflex Blues and matte finish papers, for example, become much easier to work with as far as ink drying is concerned...This is a product I clearly recommend to printers on a constant basis to help with quicker turn times.”

– James Kohler  
Graphic Arts & Printing Scientist  
International Paper

“Several Yupo printers have stated that using SpeedyDry greatly reduces their drying time when printing on plastics.”

– Dave Jeffers  
Technical Service Manager, Commercial Print Division  
YUPO Corporation America
